Futurios Technologies is a leading website designing and mobile app development company in India, supporting companies be it from startups, small businesses to large enterprises design, develop and launch custom mobile apps. Direct from Mobile App planning to Design and Development to Mobile Application Testing and Deployment, we stick to proven International standards and methodology to produce #1 ranking mobile apps. We develop and place versatile software solutions that incorporate strategy and industry-specific accelerators directed towards transformation and building a future proof company.

Futurios technologies is the best android App development company in UK and India. Android is an open source Operating system which has an large user base and app development process is easy. We have a group of full-stack Android application engineers, having hands on expertise on Kotlin, Java, C, C++ HTML, and CSS to develop best quality Android applications for all kinds of products and business needs. Our android programmers build applications for all the categories of Google Play Store.

CUSTOM ANDROID APP DEVELOPMENT

We analyse our client's idea and requirement of mobile application and provide them with the best solution that is cost efficient and fulfills their business needs. We use latest android SDKs and provide them with international standard high end android app . Futurios is the best Android App development company near you which can provide affordable and quality delivery in short span of time.

ANDROID APP UI/UX DESIGNING

Our designer team has worked on many projects and has experience in delivering most attractive and interactive UI designs using best designing approach. We first showcase our client's with prototype/ demo screens and share our idea and incorporate further changes after consultation and then work on the final idea of the client.

ANDROID WEB BASED APPLICATIONS

Our android phone/gadget needs to be installed with a web browser only for mobile web applications. This can add effectiveness to the business and keep a track of daily processes. Our team gathers necessary requirements and suggests the best Android web based application to clients.

ANDROID APPLICATION TESTING

We have a team of quality assurance experts who check the applications thoroughly before it is released to play store. They make sure that the designs are perfect, UI/Ux is interactive, working is smooth and functionality matches exactly with the requirements shared by the client earlier.

Android Studio

Google has declared Android studio as the official development environment for building Android applications. It provides various tools for effective completion of an high-quality app which would run successfully on every type of android device. It even offers code editing, debugging, testing and profiling tools features. The coding is done using Java, the official language.

Objective-C

Since all android applications are written against Java SDK, IntelliJ being an environment for all kinds of java applications automates and streamlines the entire process right from writing the source code to publishing the app in Google play store. Our experts have experience in developing applications using this IDE as well.

Besides Android app development we are also having expertise in IOS App development.
