Dermapen treatment in Mumbai is a non-surgical technique that helps to remove the layers of skin using needles. The dermapen works on the principle of Micro-needling, which involves making shallow punctures in the skin surface by means of single needle or multiple needles to stimulate new collagen and elastin production. This method has been found effective in reducing wrinkles, acne scars and stretch marks. Dermapen treatments involve the use of a device that contains hundreds of tiny needles or pins that are used to thin out and remove scarred or sun damaged skin tissue.
