The spring is blooming and full of vitality. After experiencing the "quick-frozen" mode in winter, do you want to take good care of your car? **China international auto parts exhibition** organizes some normal maintenance for trucks I hope to help my friends.

Painted surface: There is a lot of rain in spring, and the acid in the rain will corrode the painted surface, so you can wash your car after the rain. Try not to expose to strong light after washing the car, as this will easily cause the paint to fall off. According to the vehicle condition, you can choose wax, film, glaze and other lacquer maintenance.

Paint curing

Interior: Seasonal maintenance is indispensable for interior cleaning. You can use a towel or sponge dipped in soapy water or detergent to scrub the dashboard. It should be noted that before cleaning the surface of the chemical fiber, first use a vacuum cleaner to remove the dust, and then soak it with a special textile cleaner for a few minutes. After the dust dissolves, wipe it with a towel.

Interior cleaning

Engine: The engine is the "heart" of the truck. In order not to affect the life of the truck, friends should pay more attention to the maintenance of the engine. Specific measures include maintenance of the three filters and cleaning of the crankcase, fuel system and water tank.

Engine maintenance

Chassis: Fuel pipes, exhaust pipes, gearboxes, and engine blocks are arranged on the chassis. These important parts need to be protected. Every time friends come back after pulling the goods, carefully check whether the chassis is scratched, if it should be repaired in time, do a good job of sealing and anti-rust work.

Chassis maintenance

Battery: Friends who drive know that if the vehicle is parked for a long time, the battery may be exhausted. If you do n't use the vehicle for a long time, you may wish to unplug the battery cable. In addition, it is necessary to check whether the working performance of the battery is good, and if necessary, go to the repair station for a test.

Battery maintenance and periodic testing

Tires: Even when driving under good road conditions, friends need to check the tires frequently to rule out some hidden damage and wear. As the weather warms, proper tire pressure should also be maintained, which can extend tire life and reduce fuel consumption.

Check tires regularly

As the saying goes, sharpening the knife does not cut the woodworker by mistake, adjusts your car to the best condition, and can work more safely and worry-free. Mastering the basic knowledge of repair and maintenance is the key to safe driving. Spring maintenance is more important, friends are careless!

Finally, the **china international car wheel show** reminds all friends to check the car regularly to find and solve potential failures as early as possible to prevent them from happening.

1. Check the engine oil and brake fluid, and add it in time if it is lacking.
2. Check the chassis for oil leakage and water leakage.
3. Check whether the fan belt is damaged or broken, and adjust the tightness of the belt.
4. Check the whole vehicle wiring harness for wireless skin cracking, loosening, and poor contact.
