Reverse pulse **dust collector supplier** in China offers reliable customized reverse pulse dust collector for cement plant, high purification efficiency.

The major characteristic of reverse pulse dust collector is off line dust removal method. The pulse jet dust removal system can be operated chamber by chamber. The bag chamber which is proceeding the dust removal procedure can stop air filtering works while the other bags are still functional. This is why the reverse pulse dust collector can handle the inlet dust content with more than 1000g/m³.

FEATURES & BENEFITS

- Heavy Duty - purifying the air with dust density more than 1000g/m³.
- Good Dust Removing Effect
- High Purification Efficiency
- Large Processing Air Volume
- Long Service Life
- Easy Maintenance
- Safe and Reliable Operation
- Customized and Special Designed According to the Requirement of End Users.
