Ghaziabad Precision Products (GPP) was established in 1988 with the goal of creating a technical conglomerate that specializes in diesel engine valve train components. It manufactures 12 million pushrods annually in three plants specializing in solid forged, solid welded, projection welded, and press fit types. Customers both domestically and internationally embraced the product right away.

The company's product line has grown over time to include rocker arms, shafts, and assemblies in addition to push rods. GPP continuously investigates new business possibilities, and potential engine valve train solutions for Euro V and VI compliance, and provides professional guidance on international regulations in order to advance and upgrade technology. GPP thinks it is crucial to provide top-notch goods at a reasonable price in order to stay competitive in a dynamic international market.

The GPP is moving forward toward a bright future and becoming one of the world's preferred suppliers of valve train components with well-defined short-term plans and long-term growth strategies. It aims to provide clients with products and services that are error-free and delivered on time. The four cornerstones of GPP are quality, price, delivery, and services.
