Heavy Industry Counterweight Iron

Heavy Industry Counterweight Iron is generally classified according to the molding method, and it is conventionally divided into ordinary sand counterweight iron and extra heavy iron.

Forklift Counterweight Iron is generally classified according to the molding method, and it is conventionally divided into ordinary sand counterweight iron and extra heavy iron. The common sand-type counterweight iron includes three types: wet sand type, dry sand type, and chemically hardened sand type. Special counterweight iron can be divided into two categories according to different molding materials: one uses natural mineral sandstone as the main molding material, such as investment weight iron, shell weight iron, negative pressure weight iron, and mud Type counterweight iron, solid counterweight iron, ceramic counterweight iron, etc .; Another uses metal as the main casting material, such as metal type counterweight iron, centrifugal counterweight iron, continuous counterweight iron, pressure counterweight iron, Low-pressure counterweight iron, etc. Heavy industry counterweight iron process can be divided into three basic parts: namely counterweight iron metal preparation, mold preparation and casting processing.

The weight of this product is 8111177, weight 3.56 tons C60 7.0T series Applicable models: 7 tons forklift
