Iverheal 6 mg is a medication that contains Ivermectin as its active ingredient. Ivermectin is primarily used to treat certain parasitic infections in humans, such as strongyloidiasis and onchocerciasis. It is also used in veterinary medicine to treat various parasitic infections in animals. Iverheal 6 mg is available in the form of tablets and is typically prescribed by a licensed medical doctor to treat parasitic infections in humans. The dosage and duration of treatment will depend on the specific condition being treated and the individual's age, weight, and medical history. It is essential to take **Iverheal 6 mg** or any medication containing Ivermectin only under the guidance and prescription of a qualified healthcare provider. Ivermectin should not be used for self-medication or without a proper diagnosis and prescription from a healthcare professional.
