Paper soup container may be used with hot or cold liquids, made from renewable resources, and is lined with PE. The cup provides an alternative to traditional disposable soup cups. The Soup paper cup is insulated to protect hands from the heat of hot liquids, color printed by size for convenience in serving, and fits a lid sold separately to prevent leaking. Being compostable in municipal and industrial composting facilities, soup cup / Kraft Paper Soup Cup is printed with a decorative pattern. Disposable food service products are used to store, insulate, transport, prepare, and serve food and drink. They may be made of paper, plastics, or metal foil. Food service products for freezing items protect their contents from freezer burn, contamination, and drying. Microwavable food service products are safe for use to heat food in a microwave.

Compostable food service products biodegrade about as fast as yard trimmings and food scraps, and disintegrate so that no large plastic fragments remain. Eco-Products manufactures recycled and biodegradable food service disposable products.
