Malegra Professional is a medication that contains sildenafil citrate, which is used to treat erectile dysfunction (ED) in men. It belongs to a class of drugs called phosphodiesterase type 5 (PDE5) inhibitors. **Malegra Professional** helps to increase blood flow to the penis, allowing for a firm and long-lasting erection. The usual recommended dosage of Malegra Professional is 100 mg. It is important to note that the dosage may vary depending on individual factors such as overall health, response to the medication, and any underlying medical conditions. The medication should be taken approximately 30 minutes to 1 hour before sexual activity, and its effects can last for up to 4-6 hours. It's crucial to follow the instructions provided by your healthcare provider or the medication's label regarding the dosage and administration of Malegra Professional. It is recommended to consult with a healthcare professional or pharmacist who can provide you with accurate and personalized information based on your specific needs and medical history.
