Ked India provides the **Natural Gas Dehydration Services in India**. There are two fundamental reasons why NG storage is equally vital. Primarily, it can decrease dependence on NG supply. Bearing this in mind, federal tactical reserves are made. Second, NG storage empowers the most capacity of supply lines to be tapped. NG is saved in summer periods when there is a reduced demand for this and is removed at winter intervals when substantial quantities of NG are utilized for heating.

Reserves smooth seasonal peaks along with short term peaks of NG ingestion. Underground Gas Storages (UGS) would be the most valuable alternative for storing huge volumes of gasoline. Nowadays there are roughly 135 UGSs within the European Union. Their complete maximum technical storage capacity is currently about 109 ms3.
