As one of the common problems encountered by waterproof nylon fabric, printing fastness has always been a technical difficulty in the industry, especially when pigment printing is carried out on waterproof nylon fabrics, the fastness is always difficult to reach the required technical level. Why is there a problem with the fastness of nylon fabric? In fact, the fastness of nylon fabric printing is affected by many factors such as the type of nylon fabric. Therefore, in the study of the fastness of waterproof nylon fabric, it is necessary to analyze the printing adaptability of different materials, select the most suitable ink and other materials, and pay attention to the operation technology to ensure the printing effect.

The transfer printing fabric is also one of our product, welcome to click our website:
