<b>Contact Person</b>	Uday Parida
<b>Mobile Number</b>	01128085036
<b>Email</b>	marketing@simnovus.com

Sinnovus is a young test and measurement company offering software-based UE Simulator and NW Emulator to validate 4G and 5G base stations and devices. Simpler licensing model, multi-technology support, and ability to run on commercial off the shelf (COTS) hardware, ensure that the customers get the least total cost of ownership.

The Callbox - Network Emulator recreates an entire 4G & 5G network on COTS hardware. Supporting both NSA and SA mode, 100MHz channel bandwidth, and support of all global FDD & TDD bands, you can verify the device under all possible configurations in the lab.

The Simnovator - UE simulator can simulate hundreds of 4G and 5G subscribers with complex traffic models. With the support of VoNR and several other application traffic, it's the perfect tool for the base station validation.
