Stainless Steel Flange Supplier China

Flange is a part of the connection between the shaft and the shaft, which is used to connect the ends of the pipe. Stainless steel Flange wholesale China is also used in the flange of the import and export of the equipment, which is used to connect the two equipment.

Flange is a part of the connection between the shaft and the shaft, which is used to connect the ends of the pipe. **Yarong Casting flange** is also used in the flange of the import and export of the equipment, which is used to connect the two equipment.

We supply **flange for chemical engineering, flange for petroleum, flange for refrigeration**

Product information of Stainless Steel Flange Supplier

Produce name Casting flange wholesale

Standard	EN, ASME, ANSI, DIN, KS, JIS, GB, ISO
Material	stainless steel, carbon steel, alloy steel
Size	1/2"-100", DN15-DN2000
Pressure	PN1.0-PN420, Class150-2500
Surface	Clear, Bright, Brushing
Packing	Steel Pallet, Plywood, wooden Pallets
Origin	Made in China, Hebei
Species	More Than 300 Kinds For Choice

Production process of flange

Our company's flange manufacturing process is divided into two kinds: Casting flange and forging flange

Forged flange is generally lower carbon content than cast flange and is not easy to rust. The forging has good streamline, compact structure and better mechanical properties than cast flange.

Forgings can bear higher shear force and tensile force than castings.

The advantages of casting are that it can produce more complex shape and lower cost.

The forging has the advantages of uniform internal structure and no harmful defects such as pores and inclusions in the casting.

The process of **Yarong forging flange** is generally composed of the following processes, i.e. blanking, heating, forming and cooling after forging. The forging process includes free forging, die forging and die forging. In production, different forging methods are selected according to the forging quality and production batch.

Flange is widely used in chemical engineering, construction, water supply, drainage, petroleum, light and heavy industry, refrigeration, sanitation, water heating, fire protection, electric power, aerospace, shipbuilding and other basic engineering because of its good comprehensive performance.

The general processing and manufacturing procedures of flange are: purchase of raw materials → cutting and blanking → solid solution → forging and forming → lathe finishing.

SUPPLIER

HEBEI YARONG PIPE TRADE Co.Ltd.

Address	North of Building No. 25, Hardware Pipe City, Xindian Town, Mengcun Hui Autonomous County, Cangzhou City
Contact Person	Junjun Hao
Mobile Number	8618832726557
Email	yarongmichaelli@gmail.com
