1. Wisdom Tooth Extraction

Wisdom teeth are the last 4 set of teeth that erupt in the mouth in a lifetime. Excruciating pain is generally experienced by most people during its eruption.

2. Root Canal Treatment

Root Canal treatment/ RCT is done when the root area of the tooth gets decayed due to extensive bacteria development. The dental expert will remove all the pulp area which gets infected and put the necessary suitable material in the area.

3. Pediatric Dentistry

According to the best kids dentist, infectious dental diseases in children are five times more common than asthma and seven times more common than hay fever. Hence, it is essential to take appropriate steps to remedy this situation.

4. Dental Scaling

Teeth Scaling is a part of the oral hygiene regime and involves the removal of dental plaque and tartar from teeth with the intention of preventing cavities, gingivitis, and periodontal disease.

5. Dental Cleaning

No matter how well you brush and floss your teeth, you need to get professional dental cleaning done at your dentist's clinic to help remove stains, and tartar, other dental problems apart from other deposits between your teeth and gums, to get good oral hygiene.
