Zhongshan Sanzang Electric Technology Co., Ltd. was founded in 2012, and it is a company that has integrated research, manufacture and sales, and gained the qualification of National high-tech enterprise. At present, our enterprise has more than 100 employees, and the headquarter is in Zhongshan city. In Shenzhen Science and Technology Park and Beijing High-tech Zone, our enterprise has set up cooperation relationship with the semiconductor OEM enterprise such as the Grand Force Semiconductor (GSMC), Semiconductor Manufacturing International Corporation (SMIC) and Wuxi Altek etc., and our company has the capability in designing integrated circuit of more than 14NM, and our IC design department has performed all design works, encryption chip SOC is applied in our printer, our IP module designed by ourselves has realized ECC, ESA, AES and hardware acceleration core of state secret algorithm. Our main product is compatible printer chips for the brand of Samsung, Dale, Epson, HP, and Xerox etc., we also produce the other composable chips for several Samsung series and other brands. At present, our chip market share has occupied over 30% of the chip market, and our monthly production capacity is 4-5 million pieces.

In recent years, our company has realized diversification development, set up Beijing research and development department, and pushed motion camera of Seabird brand, and we have absorbed high-end talents from the company of Intel, Nokia, and LeTV etc. We have researched and developed for more than 2 years and got the IP privilege from Huawei Hi semiconductor chip, and based on latest video type SOC chips, we have also developed 4k, 8k solution for both audio and video.

One of the 4k consumable product developing item is applied in the cooperation with Xiaomi company, and the latest live webcast solution based on 4K/8K of 5G would be possible to be completed in October, 2019, and we have set up cooperative purpose with China Mobile Chengdu Research Institute, and will first issue 5G solution for both audio and video, and then accelerate the realization of 5G application.

In 2014, our company has established research team on printing item, and pushed handheld inkjet printer of the Besheng brand. We use the partner mode to absorb the talents, and obtained a lot of technology achievement including: related technology on inkjet printing, related breakthrough on related patent blockage, and related technology, system on thermosensitive printer chip. We are developing the thermosensitive printer series products with Xiaomi company, and it is expected to be on sale in August, 2019. And the creative product of intelligent household printer will also be expected to complete design in the end of 2019, and be pushed to market as soon as possible.

Our company innovates independently, gets interculture patent authorization on multiple invention patents, explores in product form, usage series, and business pattern, and innovates in progress. From Huawei event, we have learnt the lesson

: We can not pay attention to make money in a hurry. The confidence for any business pattern comes from product, and the source of product comes from research and development, research and development needs accumulation, and creativeness needs time. But one day, hard work will bring rich fruits, industrious scientific and technological personnel will have the glorious time.
